

One of the single best ways to protect your information and your privacy is to encrypt your data – so, why do companies make it so hard to use?

As a thought-leader and innovator in cybersecurity and encryption we wanted to build a platform that answers the question above. With that in mind, we only had two primary goals for our SCIFCOM Encryption-as-a-Service Portal:

GOAL #1

- Make it simple for people to begin using encryption so they'll get comfortable using it all the time.
- No downloading a large software package, navigating complicated installation menus or having to learn another new application, just to accomplish a simple task.

GOAL #2

- Make all of our patented, cutting-edge encryption, key distribution, and authentication technologies available to everyone who wants to protect their information and their privacy from cyberattacks.
- Until now, protection this strong would typically be reserved for only the very largest organizations or governments - we've made it available to the general public.

IT'S SO EASY TO GET STARTED...

- STEP1: Sign up for an account with your First Name, Last Name, Email, Password
- STEP2: Choose your plan: Free, Individual, or Enterprise. That's it.

WHAT SCIFCOM CAN DO FOR YOU

XFA MAIL

Protect your email and your integrity. XFA is a weightless, no hassle patented email security solution that installs as a simple plug-in that works with your existing existing email client. In minutes, you can add maximum security encryption for complete peace of mind.

Protect Your organization's sensitive emails and attachments to ensure the confidentiality, authenticity, and integrity of your emails while eliminating the threat of phishing - still the number one cause of malware, virus and ransomware

ENCRYPT FILE

Shield your sensitive files from hackers or unauthorized parties using the strongest available encryption technology.

Users can control the encryption strength by choosing between AES256, PKMS2, or our patented next generation XOTIC encryption to securely share files encrypted with unique keys for each recipient.

SEND FILE

Protect your files in transit. Encrypt and share files with anyone with no additional software to install. SCIFCOM offers the strongest enhanced encryption file security product available to consumers. We use one-time pad (OTP) encryption to secure files from man-in-the-middle and Wi-Fi sniffing attacks. Feel secure knowing that your email will get to your intended recipient without being compromised.

SUBROSA SANDBOX

Improve your site or application's user experience by replacing passwords or adding a 2nd authentication factor using SUBROSA. At SCIFCOM, developers and users can trial and play with the functionality of SUBROSA in an easy to use Sandbox environment.

SUBROSA®

SUBROSA's patented photo/digital image-based authentication and encrypted key generation software is far more secure than PINS or user-generated passwords and the user experience is greatly enhanced when their login can be customized by them. Even the minimum selection of just 4 tiles produces a 65,000+ character encrypted password.
